ALUMINUM

Our aluminum frames are coated with a premium powder finish, providing a sleek matte look and a weatherproof seal. Aluminum is a lightweight metal that withstands various weather conditions, including rain, UV rays, wind, heat and cold.

PULL-OUT MECHANISM

The synchronizing pull-out mechanism makes it easy to enlarge your table for more seating space. Simply pull on the shorter side to activate it, and the tabletop extends in both directions. The extension is hidden under the tabletop when not in use.

CERAMIC

Our ceramics are produced using a traditional method and fired at over 1000°C, providing outstanding outdoor performance. The ceramic retain its color over time, unaffected by weather. The high firing temperatures make it resistant to heat and sparks. The surface is highly durable and scratch-resistant.

STAINLESS STEEL

Stainless steel is durable, resistant to rust, corrosion and requires minimal maintenance. It's strong, easy to clean and has a sleek, modern look. It is environmentally friendly and immune to infestations.

LIFT FUNCTION

With the height adjustment mechanism, you can effortlessly modify your table's height. This versatile table adjusts to your preferred seating position, making it suitable for use as both a lounge and dining table. The adjustment is controlled by a lever under the tabletop, allowing you to easily raise the table by pulling it upwards.

CERAMIC ON GLASS

A layer of ceramic is applied to a glass surface. This combination is often used in various applications due to its unique properties such as strength, durability, and resistance to heat, chemicals and wear. It is also known for its unbeatable prices.

TEAK

Teak is a durable, slow-growing hardwood with a high natural oil content. Our furniture is made from 100% FSC-certified teak. Untreated teak will naturally turn silver-grey over time, which does not affect its quality. Regular cleaning and oiling are required to maintain the original wood color.

MOVE FUNCTION

The Move function in our garden chairs offers effortless comfort. A button in the armrest lets you smoothly adjust the backrest by simply pressing it and leaning back. The hidden hydraulic pump makes this adjustment easy with minimal effort.

ROPE OLEFIN

Rope features a hand-woven open design that adds a sleek, modern touch to furniture. The fabric is soft to the touch, dries rapidly and resists water or mold, even in wet conditions. Its surface is crafted from colorfast olefin fibers, with durable webbing inside for lasting stability and strength.

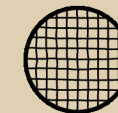

SINTERED STONE

Sintered stone is an engineered material made by heating natural minerals under high pressure to create a durable, non-porous surface. It's highly resistant to scratches, heat, stains and UV damage, making it ideal for garden furniture. It combines the look of natural stone with enhanced strength and sustainability.

TEXTILENE

Textilene is a durable, woven polyester fabric coated with PVC, often used for outdoor furniture such as chairs and cushions. It resists UV rays, mildew and water. Also strong, easy to clean and quick-drying. The fabric retains its shape and color over time, even in harsh weather conditions.

HIGH-DENSITY POLYETHYLEN

HDPE is a strong, durable plastic known for its resistance to chemicals and environmental stress. Made from petroleum, it has a dense structure that makes it more impact- and abrasion-resistant than other plastics.

OLEFIN FABRIC

Olefin fabric feels soft and smooth, just like cotton. It's lightweight, breathable, durable, moisture-resistant, color retention and having low absorbency, making it ideal for products that need to resist stains, mold and mildew - excellent for outdoor use.

THERMOPLASTIC POLYURETHANE

Thermoplastic polyurethane (TPU) is a flexible, durable plastic known for its toughness, abrasion resistance and elasticity. It's regularly used to make cushions water-resistant.

ALL-WEATHER CUSHIONS

All-weather cushions are made from durable, water-resistant fabrics and quick-drying fillings. They resist fading, mold and mildew, staying comfortable and looking good in all weather conditions. These cushions require minimal maintenance and are perfect for outdoor use.

QUICK-DRY FOAM

Quick-dry foam is designed to dry quickly after getting wet, preventing mold and sogginess. Made with special materials, it allows water to drain fast. Commonly used in outdoor furniture and boat cushions, it reduces drying time compared to traditional foam, making it ideal for moisture-prone environments.

WATER REPELLENT

Our water repellent cushions are designed for outdoor use and can withstand light showers or moisture without any problems.

SUNPROOF

Designed to resist damage from prolonged exposure to sunlight. This includes being UV-resistant, so it won't fade, crack or weaken under the sun's rays. Sunproof materials ensure that the furniture looks good and functional for a longer time, even with regular sun exposure.

The Beam lamps, powered by solar energy, are simple to charge. Just place them in direct sunlight during the day and they will automatically illuminate as the sun goes down. With a 12-hour operation time, these lamps also offer USB charging capabilities, are weather-resistant and feature three adjustable light settings.

Enhance your indoor or outdoor areas with the Beam collection. Its distinctive design allows light to gently filter through small openings on the surface of the tube, creating a warm and inviting atmosphere.

BOB

Discover the flexibility of the BOB collection, which features portable outdoor LED lamps in three sizes. Made with rotationally molded PE bulbs and powder-coated aluminum frames.

Charging is straightforward via a USB cable, typically taking 3 to 4 hours to fully charge, offering 8 to 10 hours of light, depending on the chosen brightness level.

Tailor your lighting with two temperature options: warm white for a candlelight effect or cool white. You have two brightness settings, 50% or 100%.

For a more atmospheric touch, you can also select the flickering candlelight mode.

Warm LED lighting
100 lm Max

This lamp features three adjustable dimmable settings to suit your needs: 30%, 50%, and 100% intensity, allowing you to adjust the brightness to your preference. You can choose an automatic 100% setting, which provides maximum brightness based on solar power availability.

The Teak Solar Powered Floor Lamp operates up to 18 hours on a full USB charge, offering flexibility in both outdoor and indoor use. It provides warm LED lighting, creating a cozy ambiance for any setting. The lamp is USB rechargeable with a 2m USB-C cable included, making it easy to charge from any compatible power source.

SUNNY LAMP | 48 x 146 x H183-163cm

ALU IP44

SUNNY

The light controls are conveniently located yet discreet.

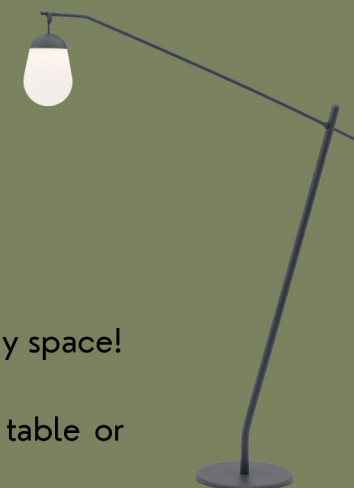

You can easily change the height by moving the "light arm" to a different hole in the base.

The Sunny pendant lamp is the perfect lighting solution for any space!

Featuring an adjustable arm, it can hang above your dining table or be positioned lower for a cozier feel.
